the invention relates to a monoclonal antibody (I) having high avidity to human ZAQL-1 ligand polypeptides, comprising either of two fully defined sequences of 86 amino acids (S1). (I) is ZLI-107a or ZLI-234 a produced sequences of 86 amino acids (S1). (I) is ZLI-107a or ZLI-234 a produced comparing out assay of the polypeptide containing (S1) which involves reacting (I) with the test-liquid containing (B1) which involves reacting (I) with the test-liquid containing (B1) which is salt, and measuring the ratio of the polypeptide bound to (I). (I) is useful as a diagnostic or therapeutic agent for diagnosis and/or treatment of diseases such as endometrial cancer, endometriosis or covulation disorders, digestive diseases, diseases associated with angiogenesis, diseases relating to pregnancy, eating disorder, sleeping disorder, seasonal depression, reproductive dysfunction, endocrine of seasons and contained the contained the cerebral circulatory disorder, sieases, various disorders caused by aging, anxiety, depression, manic depression, schizophrenia,
                                                                                                                                                                            anticonvulent; antidepreseant; antidiabetic; anti-HIV; antimanic; antiparkingoniant; antidepreseant; antidiabetic; anti-HIV; antimanic; antiparkingonian; cerebroprotective; cytostatic; eating disorders; endocrine; gastrointestinal; gynecological; hypotensive; neuroprotective; nootropic; ophthalmological; tranquilizer; vasotropic; vulnerary; monoclonal antibody; human; ZAQL-1; ligand; hybridoma cell; assay; diagnosis; endometrial cancer; endometriosis; ovulation disorder; diagnosis; endometrial depression; reproductive dysfunction; endocrine disease; senile dementia; reproductive dysfunction; endocrine disease; senile dementia; spinal injury; epilepsy; anxiety; depression; schizophrenia; alcoholism; parkinson's disease; hypertension; arteriosclerosis; arrhythmia; premenstrual disorder syndrome; glaucoma; AIDS; diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alcoholism, Parkinson's disease, hypertension, arteriosclerosis, arrhythmia, premenstrual disorder syndrome, glaucoma, AIDS, diabetes, etc. This sequence corresponds to a ZAQ-1 ligand associated protein used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               monoclonal antibody having high avidity to human ZAQL-1 polypeptide,
                                                                                                                                                         antiangiogenic, antialcoholic, antiarrhythmic, antiarteriosclerotic,

The method comprises providing a compound that modulates prokineticin receptor (PRR) signaling, contacting a neural stem corporation or progenitor cell with the compound, and determining the ability of the neurogenesis or for identifying compounds that modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkinen's disease. The parkinen's disease or other debilitating neurodespenerative diseases. The present sequence represents human prokineticin 2 (PRZ) isoform 2, which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a compound that modulates neurogenesis comprises contacting a neural stem or progenitor cell with a compound that modulates prokineticin receptor signaling and determining its ability to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

The present sequence represents a human Zven1 polypeptide. The Zven1 gene is present on chromosome 3p21.1-3p14.3. The specification also describes is present on chromosome 3p21.1-3p14.3. The specification also describes Zven2. Zven polymocleotides and polypeptides are useful in veterinary and human therapeutics, for treating small cell cancer of the lung, to bromote wound healing, to prevent or to treat an adverse reaction of the promote wound healing, to prevent or a skin-irritating agent, to stimulate the immune system of an immunocompromised individual, as antitumour agents, as antiinflammatory agents, as agents to regulate regeneration or remodeling of tissue, as agents to modulate necrosis or tissue growth developmental arrest, to inhibit proliferation of tumour cells, cellular differentiation and necrosis, to treat disorders associated with agestrointestinal cell contractility, secretion of digestive enzymes and caids agents and crohn's disease
                                                                                                                                                                                                                                                               Zvenl; 3p21.1; 3p14.3; Zven2; small cell lung cancer; wound healing;

The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZACC, human ZAQT, rat ZAQI (TZAQI), rZAQ2, human and mouse ISE (mIE) receptor, and mouse GPR73) to receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Alabeimer's disease, Parkinson's disease and
                                                                                                                                                                                                                                          G-protein coupled receptor; GPCR; ZAQ; human; ZAQC; ZAQT; rat; ZAQ1; rZAQ1; rZAQ2; mouse; ISE receptor; mISE; GPR73; Bv8 protein; MIT1; digestive disorder; central nervous system disorder; CMS; diarrhoea; bowel inflammation; constipation; food absorption disorder; nootropic; Alzheimer's disease; Parkinson's disease; schizophrenia; laxative; antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 AVITGACDKDSQCGGGGCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises a method for producing an active peptide that has the same activity as a ZAQ ligand isolated from eukaryotic cells. The method of the invention is useful for the production of a physiologically active ZAQ ligand for use in preventing or treating digestive diseases (e.g. colitis and diarrhea). The present amino acid sequence represents a human physiologically active ZAQ ligand-related protein
                                                                                                                                                                                                                                                                                                                             Industrial production of physiologically-active ZAQ ligand by expressing in transformant prokaryote and refolding in redox buffer, for use in preventing or treating digestive diseases e.g. colitis and diarrhea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for such that gastrointestinal motility. They are useful for syndrome, diabetic gastroparesis, postoperational ileus, chronic constipation and gastrointestinal reflux disease. The proximetical antagonists are useful for inhibiting gastrointestinal motility in conditions of diarrhoea, malabsorptive disorders, inflammatory bowel disorders, infectious diseases and intestinal cancers. The antagonists also act as analgesics. The present

The present invention relates to a novel method of inducing proliferation of endothelial cells or enhancing cell survival, involving contacting the cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells to inducing proliferation or to enhance survival of the cells. The method is useful for inducing proliferation of endothelial cells and to enhance cell survival, where the cells are vascular endothelial cells and to enhance cell proliferation, for treating cancer (e.g., hormone-dependent cancer or cancer of the reproductive organs, especially testicular cancer) in cancer of the reproductive organs, especially testicular cancer) in the cancer of the reproductive organs, especially testicular cancer) in the condition associated with hormone producing tissue which is elected from lipoid congenital adrenal hyperplasia, infertility, sexual maturation, androgen-dependent tumours, precocious puberty, adrenal-chypoplasia congenita, McCune-Albright syndrome and hypogonadotropic hypogonadism. The present sequence is human Bv8 homologue splice variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inducing proliferation of endothelial cells or enhancing cell survival, by contacting the cells with Bv8 or introducing nucleic acid encoding Bv8 into cells to induce proliferation or to enhance survival of the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRWHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid molecule (I) that encodes a Zveni polypeptide. (I) is useful for inhibiting the proliferation of tumour cells, as probes or primers to clone 5' non-coding regions of a Zven gene, to direct the expression of heterologous gene in tissues of, for example, transgenic animals or patients treated with gene therapy, to detect the expression of a Zveni or Zveni gene in a biological sample, to detect activated neutrophils, to identify the characteric agents that modulate the response of a neutrophil to a pathogen, to determine whether a subject's chromosomes contain a mutation in the Zven gene, or to detect aberrations in Zveni or Zveni journes in settle as educational tools, as laborations in Zveni chemistry and antibody production and analysis. The present sequence

The invention desribes an isolated Zvenl polypeptide comprising a sequence that is at least 70% identical to amino acid residues 23-108 of the 108-amino acid sequence and that binds with an antibody that specifically binds with a polypeptide comprising the sequence comprising 108 amino acids. The polypeptide has cytostatic properties and is useful in gene therapy. The protein is Zvenl procein and useful for preparing a composition for treating e.g. cancer. This sequence encodes the novel human polypeptide Zvenl encoded by a gene found on chromosome 3p21.1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PROK1; PROK2; G protein-coupled receptor 192; GPCR 192; ligand; cancer; metabolic disorder; central nervous system disorder; gastrointestinal disorder; immune disorder; neuroprotective; immunosuppressive; cytostatic; agonist; entagonist.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human Bv8-related protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              laxative; antiinflammatory; neuroprotective; nootropic; antiparkinsonian; antirheumatic; antiarthritic; antidabetic; antiallergic; antiasthmatic; vulnerary; cytoetatic; antibacterial; virucide; gene therapy; prokineticin; diagnostics; forensics; gene mapping; drug screening; biodiversity; impaired gastrointestinal motility; chronic constipation; diabetic gastroparesis; irritable bowel syndrome; postoperational ilous; anglogenerative disease; irritable bowel syndrome; postoperational ilous; neurodegenerative disease; halbainer's disease; Parkinson's disease; autoimmune disorder; rheumatoid arthritis; diabetes; allergy; asthma;
                                                                           Identifying an agonist or antagonist of G-protein-coupled-receptor 192, GPCR), useful for treating metabolic or immune disorders, or cancer comprises contacting GPCR 192 with a test compound, and detecting agonist or antagonist activity.
                                                                                                                                                                                             The present invention relates to a method of identifying an agonist or antagonist of G protein-coupled receptor (GPCR) 192, which comprises contacting GPCR 192 with a test compound, and detecting agonist or antagonist activity. The methods and compositions containing the agonist or antagonist are useful in the manufacture of a medicament for treating central inervous system, metabolic or immune disorders, or cancer. The present sequence is human prokinction 2 (PROK2) as shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

The invention relates to novel prokineticin-like polypeptides and polymucleotides. The polymucleotide and polypeptide are useful in diagnostics, forenists, gene mapping, drug screening, identification of diagnostics, forenists, gene mapping, drug screening, identification of mutations responsible for genetic disorders or traits, to assess biodiversity, and to produce many other types of data and products dependent on DNA and amino acid sequences. The polymucleotide and products dependent on DNA and amino acid sequences. The polymucleotide and polypeptide may also be used for treating diseases due to impaired gastroparesis, irritable bowel syndrome or postoperational lleus), for regulating angiogenesis and neovascularization, as well as growth and development in heart and other tissues, for treating sperm disorders including accospermia, neurodegenerative diseases (e.g. Alzheimer's disease or Parkinson's disease), autoimmune disorders (e.g. rheumatoid arthritis, diabetes, allergy or asthmal), wounds, cancer or infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          human; Zven1; Zven2; prokineticin2; prokineticin1; G-protein coupled receptor; GPCR73a; GPCR73b; inflammation; intestine; inflammatory bowel disease; irritable bowel syndrome; ulcerative colitis;

                                                                                                                                                  The present sequence represents a human Zven1 polypeptide. Zven1 and Zven2 are also known as prokineticin2 and prokineticin1, respectively. Receptors for Zven1 and Zven2 have been identified as G-protein coupled receptors, GPCR71a and GPCR71b. The specification describes a method for reducing or treating inflammation in the intestine of a mammal, comprising administering a Zven1 or Zven2 antagonist to reduce the inflammation in the intestine. The antagonist is preferably a receptor that binds Zven1 or Zven2. The method is useful for diagnosing or treating inflammatory bowel disease, irritable bowel syndrome, ulcerative colitis, or Crohn's disease.

The present invention describes an isolated human PRO polypeptide (1).

Also described: (1) an isolated PRO nucleic (II) acid encoding (I); (2) a vector (II) comprising (II); (3) a host cell (IV) comprising (II); (4) producing (I); (5) a chimeric molecule (V) comprising (II); (4) producing (I); (5) a chimeric molecule (V) comprising (II); (4) binds using (II); (7) a composition of matter comprising (I), an agonist of (I), an antagonist of (I), in combination with a carrier; (8) creating (MI) an immune related disease in a mammal, by administering (I), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) diagnosing an immune related disease in a mammal, by detecting the level of expression of a gene encoding (I) in a test sample of tissue cells of expression of a gene encoding (I) in a test sample of tissue cells obtained from the mammal and in a control sample of known normal tissue cells of the same cell type; (10) identifying a compound that inhibits to the activity of (I); (II) identifying a compound that inhibits cent activity of (I); (II) identifying a compound that inhibits cent and (I); (II) identifying a compound that inhibits of mammal, by administering (I) or its antagonist to the mammal. (I) has antimanemic, antiarthritic, antiinflammatory, antipsoriatic, antiantendry immune telled disease in a mammal. (VI) is useful for diagnosing an inflammatory immune response in a mammal. (VI) are useful for the polypeptide. (MI) is useful for treating mammal having an immune content of surfamining the presence of (I) in a sample suspected of containing the surfamily artherity, invented and suspected of containing the surfamily artherity is useful for treating mammal having an immune surfamily and surfamily and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           dermatitis, psoriagis, lymphadenopathy, splenomegaly and leukopaenia. The present sequence represents a human PRO protein from the present invention.

Human Bv8 homologue variant #2, SEQ ID 4.

```
The invention relates to the used of a polypeptide for modulating contractility, gastric emptying or intestinal transit in a mammal, treating gastroparesis, stimulating chemokine release, stimulating neutrophil infiltration, inducing or increasing appetite or estimulating neutrophil infiltration, inducing or increasing appetite or weight gain in a mammal, increasing or decreasing sensitization to a thermal, mechanical or painful stimulus in a mammal, or inducing thermal, mechanical or painful stimulus in a mammal, or inducing or and polymucleotides are useful for treating intestinal motility disorders and improving gastrointestinal function with Zvenl and Zven2 and improving gastrointestinal function with Zvenl and Zven2 contractility, gastric emptying or intestinal transit in a mammal, contractility, stimulating gastrointestinal contractility, stimulating chemokine cappetite or weight gain in a mammal, increasing or increasing cappetite or weight gain in a mammal, increasing or decreasing mammal, cappetite or weight gain in a mammal, increasing or decreasing cappetite or weight gain in a mammal, increasing or decreasing cappetite or weight gain in a mammal, increasing or decreasing or increasing cannique and mammal, mechanical or painful stimulating mammal, continulating vasculogenesis or anglogenesis in cardiac stem cells. This cappeting contraction to the human Zvenl protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention relates to a method (M1) for treating a disorder associated with abnormal haematopoiesis or an autoimmune disorder in a mammal. The method comprises administering antagonists for BVB or Endocrine Gland derived Vascular Endothélial Growth Factor (EG-VEGF) to the mammal. BVB and EG-VEGF are honologies of Vascular Endothelial Growth Factor (EG-VEGF) to the mammal. BVB and EG-VEGF are honologies of Vascular Endothelial Growth Factor (WEGF), an angiogenic factor known to have an important role in the manural growth and survival. (M1) is useful for treating abnormal content of growth and survival. (M1) is useful for treating abnormal content is acute myelopicliferative disorder, myelodysplastic disorder. The leukaemia is acute myeloid leukaemia. (M1) is useful for treating immunodeficiency disorder and so primary immunodeficiency disorder. Blymphocyte disorder, growth and sprimary immunodeficiency disorder. I lymphocyte disorder such as primary immunodeficiency disorder. Blymphocyte condition associated with an infectious disease (HIV infection). The immunodeficiency disorder is a condition associated with an infectious disease. Condition associated with an infectious disease. Condition, associated with an infectious disease. Condition, upus, multiple salences. The vesting lymphopaenia or colitis, lugus, multiple salences, mysathenia gravis, optic neuritis, colitis, lugus, multiple salences, mysathenia gravis, optic neuritis, colitis, lugus, multiple salences, mysathenia gravis, optic neuritis, sequence used to illustrate the method of the invention. The present sequence coding sequences for human Bv8 due to alternative septions. The present sequence coding sequences for human Bv8 due to alternative septions. The present sequence concluded to a promptise the method of the invention. The present sequence concluder and promptise the hoparin binding domain. The present sequence concluded to a promptise of the method of the invention of the promptise of the present sequence concluded to a promptise 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating disorder associated with abnormal hematopoiesis or autoimmune disorder by administering antagonist of small protein obtained from Bombina variegata or endocrine gland derived vascular endothelial growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 52; SEQ ID NO 4; 161pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coding sequence of ADS00459 does not.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             factor, to mammal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human Zven1 polypeptide with a Glu-Glu tag and Gly linker. Zven1 and Zven2 are also known as prokineticin2 and prokineticin1, respectively. Receptors for Zven1 and Zven2 have been identified as G-protein coupled receptors, GPCR73a and GPCR73b. The specification describes a method for reducing or treating inflammation in the intestine of a mammal, comprising administering a Zven1 or Zven2 antagonist to reduce the inflammation in the intestine. The antagonist is preferably a receptor that binds Zven1 or Zven2. The method is useful for syndrome, ulcerative colitis, or Crohn's disease, irritable bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human; Zven1; Zven2; prokineticin2; prokineticin1;

The invention relates to the used of a polypeptide for modulating gastrointestinal contractility, gastric emptying or intestinal transit in a mammal, treating gastropatesis, stimulating chemokine release, stimulating neutrophil infiltration, inducing or increasing appetite or stimulating neutrophil infiltration, inducing or increasing appetite or weight gain in a mammal, increasing or decreasing sensitization to a thermal, mechanical or painful stimulus in a mammal, or inducing thermal, mechanical or painful stimulus in a mammal, increasing intestinal motility disorders and improving gastrointestinal function with Zvenl and Zven2 and improving gastrointestinal function with Zvenl and Zven2 and improving gastrointestinal function with zvenl and zven2 contractility, gastric emptying or increating intending gastrointestinal contractility, stimulating gastrointestinal contractility, stimulating chemokine release, stimulating neutrophil infiltration, inducing or increasing cappetite or weight gain in a mammal, increasing or decreasing sensitization to a thermal, mechanical or painful stimulus in a mammal, contractility creating to a captric entraction to a thermal, mechanical or painful stimulus in a mammal, or inducing vasculogenesis or anglogenesis in cardiac stem cells.                                                                                       ò
                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQT, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse 15E (miSB) receptor, and mouse GPR73) to their ligands (the mature form of human, mouse or rat BVB protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The crompounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein

Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and andiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human Bv8-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human and rat brain-originated G protein-coupled receptor proteins and encoded DNAs, for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhea, constipation and mal-absorption syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes human and rat brain-originated G protein-coupled receptor (GPCR) proteins. The GPCR sequences have antidiarrheic and laxative activities. The GPCR sequences can be used for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhoea, constibation and malabsorption syndrome, including gene diagnosis and therapy. The present sequence represents a rat GPCR protein sequence, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        angiogenesis inhibitor; cytostatic; antiinflammatory; cancer; ovarian disease; diabetic retinopathy; inflammatory; ZAQ; Bv8; I5E; rat.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQC, human ZAQC, human ZAQC, human ZAQC, human ZAQC, human and mouse 15E (mi5E) receptor, and mouse GPR(3) to their ligands (the mature form of human, mouse or rat BNB protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                               antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention relates to a method of screening for a compound for its ability to modulate circadian rhythm. The method involved determining the ability to modulate circadian rhythm. The method involved determining the ability of a prokinctichi 2 (PKZ) receptor agonist or antegonist to modulate one or more indicia or circadian rhythm function. The compound ce determining its effect on a predetermined signal such as calcium mobilisation produced by the interaction of FkZ and a receptor selected from the PkZ receptor (e.g., ADO05353) or the PkI receptor (e.g., ADO05355). The invention is based on the findings that PkZ expression in the receptor activation modulates circadian fashion, and that PkZ receptor activation modulates circadian rhythm of an animal by administration of a PkZ receptor antagonist; a composition comprising a detectably labelled PkZ and an isolated mouse composition comprising a detectably labelled PkZ and an isolated mouse composition comprising a detectably labelled PkZ and an isolated mouse composition comprising a detectably labelled PkZ and an isolated mouse composition romprising a detectably labelled PkZ and an isolated mouse composition comprising a detectably labelled PkZ and an isolated mouse composition nucleoid sequence; use of such constructs to identify modulators of circadian rhythm and for the light regulated expression of a nucleic acid contour an animal, and oligonucleotides at least 17 bases in length comprising circadian rhythm; such modulators include PkZ promoter ADO05365. The modulators include PkZ promoter ADO05365. The composition which are able to hybridise to the human PkZ promoter ADO05365. The contour of the label and an animal a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antagonists which promote sleep, and PKZ receptor agonists which promote alertness. The circadian rhythm modulators may be used in the treatment of circadian rhythm disorders such as non-24-hour sleep-wake syndrome, rapid time-zone change syndrome (jetlag), work-shift syndrome, grandrome, advanced sleep phase syndrome, irregular sleep-wake pattern syndrome, syndrome associated with decreased amplitude, and seasonal affective disorder. They may also be used for modulating biological rhythms with a periodicity of less than 24 hours (ultradian rhythm) such as daydreaming, unination or hunger, or those with a periodicity of more than 24 hours (infardian rhythm) such as sexual receptivity (heat) in female animals. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neurogenesis, prokineticin receptor; PKR; neural stem; progenitor cell; neural regeneration; Alzheimer's disease; Parkinson's disease; neurodegenerative disease; prokineticin 2; PK2.
                                                                    seasonal disorders, comprises determining ability of prokineticin-2 receptor antagonist or agonist to modulate one or more circadian rhythm function indicia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 AVITGACDKDSQCGGGMCCAVSIWVKSIRICTPMGKLGDSCHPLTRKVPFFGRRMHHTCP

                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the rat Bv8-related protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                         The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkineno's disease or other debilitating neurodespenerative diseases. The used in the method of the invention to modulate neurogenesis.

The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem modulates prokineticin receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkinson's disease or other debilitating neurodegenerative disease. The present sequence represents rat prokineticin 2 (PK2), which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antiinflammatory, antidiarrhoeic, neuroleptic, neuroprotective, receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                      The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ2 and related proteins (human ZAQ2, rat ZAQ1 (rZAQ1), rZAQ2, human and mouse ISE (MISB) receptor, and mouse GPR73 to their ligands (the mature form of human, mouse or rat Bv8 protein). The receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Altheimer's disease, Parkinson's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiinflammatory; antidiarrhoeic; neuroleptic; neuroprotective; receptor.

                                                                                The present invention relates to a screening method for compounds for their ability to modify the binding of G-protein coupled receptor (GPCR) protein ZAQ and related proteins (human ZAQC, human ZAQC, rat ZAQQ. (YZAQQ), raZAQQ, human and mouse ISE (MISE) receptor, and mouse GPR73) to receptor protein and ligand are contacted in the presence or absence of the test compound. The compounds are useful in a drug composition for the treatment, and prevention of digestive and central nervous system (CNS) disorders, including bowel inflammation, diarrhoea, constipation, food absorption disorders, Alzheimer's disease, Parkinson's disease and schizophrenia. The present sequence represents a GPCR or related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes human and rat brain-originated G protein-coupled receptor (GPCR) proteins. The GPCR sequences have antidiarrheic and laxative activities. The GPCR sequences can be used for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhoea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human and rat brain-originated G proteif-coupled receptor proteins and encoded DNAs, for developing drugs to treat diseases of the digestive organs, e.g. colitis, diarrhea, constipation and mal-absorption syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                      9

cells with Bv8 or introducing a nucleic acid encoding Bv8 into the cells to induce proliferation or to enhance survival of the cells. The method is useful for inducing proliferation of endothelial cells and to enhance cell survival, where the cells are vascular endothelial cells, especially steroidogenic endothelial cells. It is useful for inhibiting endothelial cell proliferation, for treating cancer (e.g., hormone-dependent cancer or cancer of the reproductive organs, especially testicular cancer) in mammals preferably human. The method of the invention is also useful for treating a condition associated with hormone producing tissue in mammals, where the condition is associated with hormone producing tissue which is selected from liboid congenital adrenal hyperplasia, infertility, sexual maturation, andregen-dependent tumnurs, precocious puberty, adrenal hypoplasia congenita, McCune-Albright syndrome and hypogonadorropic hypogonadism. The present sequence is mouse Bv8 homologue protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the rat Bv8-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                              98
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         angiogenesis inhibitor; cytostatic; antiinflammatory; cancer; ovarian disease; diabetic retinopathy; inflammatory; ZAQ; Bv8; I5E; rat.

Angiogenesis-related proteins Bv8, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the murine Bv8-related protein of the invention.

```

```
The present invention relates to a method (M1) for treating a disorder associated with abnormal haematopoiesis or an autoimmune disorder in a mammal. The method comprises administering antegonists for Bv8 or Endocrine Gland derived Vascular Endothelial Growth Factor (EG-vEGF) to Endocrine Gland derived Vascular Endothelial Growth Factor (KG-vEGF) to the mammal. Bv8 and EG-VEGF are homologues of Vascular Endothelial Growth Factor (VEGF), an angiogenic factor known to have an important role in tumour growth and survival. (M1) is useful for treating abnormal continuous growth and survival. (M1) is useful for treating annormal continuous growth and survival. (M1) is useful for treating immunodeficiency is acute myelotid leukaemia, chronic myelogenous leukaemia, or acute continuous associated with mannodeficiency disorder. Thymphocyte disorder, or lymphodysplastic leukaemia, chronic myelogenous leukaemia, or acute disorder, a primary immunodeficiency disorder, blymphocyte disorder, gecondary immunodeficiency disorder, or a condition associated with an infections disease (H1V infection). The immunodeficiency disorder is a condition associated with an infectious disease (For treating neutropenia, which is associated with an infectious disease (Contental infection). (M1) is useful for treating lymphopaenia or autoimmune disorder such as inflammatory bowel disease, Crohn's disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokinetic receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease, parkineno's disease, or other debilitating neurodespenerative diseases. The parkineno's disease to ther debilitating neurodespenerative diseases. The present sequence represents human prokineticin 2 (PKZ) isoform 1, which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a compound that modulates neurogenesis comprises contacting a neural stem or progenitor cell with a compound that modulates prokineticin receptor signaling and determining its ability to modulate neurogenesis.
             psoriasis, rheumatoid arthritis, Graves Disease, autoimmune hepatitis, type I diabetes or aplastic anaemia. The present sequence is a murine Bv8 sequence used to illustrate the method of the invention.
                                                                                                                                                                                                        9

The invention relates to novel prokineticin-like polypeptides and polynucleotides. The polynucleotide and bolypeptide are useful in diagnostics, forensics, gene mapping, drug screening, identification of mutations responsible for genetic disorders or traits, to assess biodiversity, and to produce many other types of data and products dependent on DNA and amino acid sequences. The polynucleotide and polypeptide may also be used for treating diseases due to impaired gastrophressinal motility (e.g. chronic constipation, diabetic gastrophaesis irritable bowel syndrome or postoperational ileus), for requilating angiogenesis and neovascularization, as well as growth and cavelopment in heart and other tissues, for treating sperm disorders including azoospermia, neurodegenerative diseases (e.g. Alzheimer's disease or Parkinson's disease), autoimmune disorders (e.g. rheumatoid arthritis, diabetes, allergy or astham), wounds, cancer or infections. This sequence corresponds to a protein which has similarity to the novel prokineticin-like proteins of the invention.

Sequence 4698, Application US/09513999C

Sequence 4698, Application US/09513999C

Patent No. 6783961

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Duclert, A.

APPLICANT: Duclert, A.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

Patent No. 6783961

FILE REPERENCE: 59.US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTHARE: PROFESSED SEGUENCE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTHARE: PROFESSED SEGUENCE: DATE: US SOFTHARE: US 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Highly expressed in testis. In the SCN, expression subjected to high amplitude of circidian oscillation.

BUNDICTION: ACTAGE: Expressed in mid-late pachytene spermatocytes at the stages VII, VIII and IX of the semiferous epithelial cycle. INDUCTION: Activated by CLOCK and BMAL1 heterodimers and light; inhibited by period genes (PER1, PER2 and PER3) and cryptochrome genes (CRX1 and CRX2).

SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Yasunishi A., Yoshino M., Waterston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y.; "Analysis of the mouse transcriptome based on functional annotation of 60,770 full-length cDNAs.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nature 420:563-573(2002).

-!- FUNCTION: May function as an output molecule from the suprachiaematic nucleus (SCN) that transmits behavioral circadian rhythm. May also function locally within the SCN to synchronize output. Potently contracts gastrointestinal (GI) smooth muscle (By

-I- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle.
-I- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle.
Induces proliferation, migration and fenestration (the formation of membrane discontinuities) in capillary endothelial cells derived from endocrine glands. Has little or no effect on a variety of other endothelial and non-endothelial cell types.
-I- SUBCELMULAR LOCATION: Secreted.
-I- TISSUE SPECIFICITY: Expressed in the steroidogenic glands, ovary, testis, adrenal and placenta.
-I- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                         "Mambakine, a snake venom related endocrine hormone that controls

-!- FUNCTION: Inhibitor of Wht signaling pathway.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Placenta.
-!- SIMILARITY: Belongs to the dickkopf family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EMBL, AF127563; AAD21087.1; --

FUNCTION: Inhibitor of Wnt signaling pathway (Potential).
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Highest expression in heart, brain, and spinal
MEDLINE=21673998; PubMed=11814687; DOI=10.1016/S0378-1119(01)00838-1;
